

## The Leading Dynamic Local, State, and National Policy Model

PI<sup>+</sup> is the premier software solution for conducting dynamic macroeconomic impact analysis of public policy. As our flagship model, PI<sup>+</sup> specializes in generating realistic year-by-year estimates of the total local, state, and national effects of any specific policy initiative.

Regional Economic Models, Inc. (REMI) was founded in 1980 on a transformative idea: government decision-makers should test the economic effects of their policies before they're implemented. Our experience and development efforts have resulted in a comprehensive model that answers "what if...?" questions about your economy.

### what does REMI say?

Meet the organizations that trust REMI's peer-reviewed software for their policy modeling needs:

- Sandia National Laboratories
- Ernst & Young
- Texas Comptroller
- University of Michigan
- Tennessee Valley Authority
- National Educational Association
- South Coast Air Quality Management District
- North Carolina Department of Commerce
- Wyoming Department of Administration & Information

PI<sup>+</sup> provides an understanding of the intricate relationships between policies and their economic foundations through unparalleled, comprehensive economic impact analyses.

#### Proven Accuracy

Our clients' pioneering contributions to informing and guiding policy decisions are validated by REMI's peer-reviewed model equations.

#### Customized Models

Every model is custom-made and fully equipped with the complete inter-industry relationships found within your local, state, and regional economies.

#### Intuitive Software

PI<sup>+</sup> is a desktop application with extensive user service and support functions, offering unlimited assistance and training from REMI.
