About Us

We are the nation's leader in dynamic local, state and national policy modeling.

From the start, REMI has sought to improve public policy through economic modeling software that informs policies impacting our day-to-day lives.

We were founded in 1980 on a transformative idea: government decision-makers should test the economic effects of their policies before they're implemented.

At REMI, we're inspired by a single goal: *improving public policies.*

About Us

At REMI, we're inspired by a single goal: *improving public policies*.

Our models are built for any state, county, or combination of counties in the United States.

Our Representative Clients

Our model users and consulting clients use REMI software solutions to perform rigorous economic analysis that critically influences policy.

NORTH CAROLINA
Department of Commerce

Q&A

Objectives of the Infrastructure Deal

Benefits of Universal Broadband Access

Economic Competitiveness

Internet access enables gains in labor productivity and promotes higher compensation rates.

Sustainability

Enhanced connectivity will mitigate costs associated with congestion.

Improved Quality of Life

Through the productivity gains from public goods (places and transportation), this promotes better living conditions.

Objectives of Broadband Investment Deployment

Funding Appropriations

- \$65 Billion for Universal Broadband Access
 - \$42.5 Billion for direct spending for state funding to improve infrastructure
 - \$14.2 Billion for internet subsidies
 - \$2.75 Billion for Digital Equity Strategy

Policy Adjustments

- Addresses issues related to transparency, affordability, and accessibility
 - Increased access to low-cost internet plans
 - Transparent pricing and details relating to connectivity
 - Equal access to internet for historically underserved communities
 - Prohibits "digital redlining"

Q&A

Guiding Concepts

- REMI SEI is the premium modeling solution for evaluating the socioeconomic indicators (SEI) of project, programs, and policy changes
- Public policy should serve the interests of the public
- In order to ensure that policy effects are broad-based, need to evaluate how different social and demographic groups are affected by policies
- Required to do so by federal, state and local regulations
- American demography is changing; building a diverse workforce is imperative for future economic development and growth

Socioeconomic Indicator Dashboard: Immediate & Long Term Effects

SEI Methodology

A systematic solution that can measure the core socioeconomic implications of programs and practices to quantify and measure progress for all groups.

**Diversity,
Equity, and
Inclusion**

Immediate Effects

In the short run, decision makers are able to gain granular insights into their human capital to identify areas of opportunity.

**Compensation
rate differentials**

Income by quintile

**Employment by
race, gender, and
educational
attainment**

**Labor force by
race and gender**

Long Term Effects

In the long run, the ability to measure the progress of all divisional aspects of a region's population fosters positive externalities for all groups.

**Effective human
capital**

Economic growth

**Increased access
to opportunity for
all groups**

**Sustainable
governance**

Model Simulation Overview: Universal Internet Access

8-Major Cities Model | 70 Industry Sector | Years Observed: 2022 - 2040

Infrastructure

- Exogenous Final Demand

Agenda

Introduction

Background

Methodology

Notable Results

Conclusion

Q&A

Conclusion and Key Points

Atlanta, GA

- Lower middle-class (Lowest and second 20%) and upper middle-class (fourth 20%) jobs saw the largest compensation rate differentials from 2022-2026
- The middle 20% of industries should be incentivized to steadily expand.

Chicago, IL

- Steady gains from all groups after the initial shock
- Workforce development measures may need to be implemented with the increase of jobs requiring bachelors degrees.

Los Angeles County, CA

- The overall “value-add” of the economy is consistent and positive. Yet output decreases over time.
- Policies may need to be introduced to promote a diverse workforce that includes all communities.

Overall

- Universal internet access must be evaluated from a socioeconomic perspective to understand all of the benefits
- Other policies that aim to bridge the gap of social equity must be implemented to fully grasp the impact broadened connectivity.

Economic Modeling: Why does it matter?

Clarify

- Understand economic, fiscal and demographic implications of policies before implementation
- Ensure that public policy serves the broad-based interests of the public

Predict

- Make predictions about the effects of policies before implementation
- Avoid unwanted negative impacts
- Make effective use of resources

Inform

- Inform policy with standard metrics rather than ideology or intention
- Address stakeholders with evidence that communicates how policy benefits or disadvantages their communities broadly
